WORK EXPERIENCE : 3+ years

Senior Software Engineer (UKG)

APR 2025 - Present

- Designed and implemented a Public API for gate entry punches from time-clock devices, enabling enterprise integrations (e.g., Nestlé) across 3+ services while adhering to UKG API standards.
- Implemented **biometric template export functionality** to migrate biometric data and consent from **UTC to UDM in ZIP format**, improving device migration workflows and reducing manual onboarding effort.
- Led **end-to-end development across Angular and Spring Boot services**, delivering production-ready features with strong code quality through peer reviews, automated testing, and CI/CD pipelines.
- Contributed to platform modernisation initiatives including JDK 17 migration and Angular updates, resolving compatibility issues and improving maintainability of core services.
- Improved backend service reliability by strengthening exception handling, validation, and logging across Spring Boot APIs, enabling more stable production releases and faster debugging.
- Utilised **AI-assisted development tools** for debugging, test generation, and refactoring to accelerate development productivity.

Senior Software Engineer (Yatra Online Ltd)

FEB 2025 - APR 2025

- Resolved **high-priority production issues** for hotel inventory booking services, improving reliability of core booking APIs.
- Identified recurring backend issues and proposed **long-term fixes and configuration improvements**, reducing support overhead.

Software Engineer (Moglix)

MAY 2024 - JAN 2025

- Led a critical, time-sensitive project to streamline RFQ creation for enterprises, reducing manual effort in the supply chain by 40%.
- Worked closely with the product and engineering teams to develop APIs for seamless product catalog integration with Elasticsearch, enhancing search functionality and reducing response times by 27%.
- Implemented new features in EOC Moglix for enterprise bulk orders, streamlining the process and minimising errors, leading to a 35% reduction in manual effort.
- Developed automated reporting using cron jobs for purchase orders, items, products, and suppliers, cutting down the city head's workload by 2-3 hours.
- Resolved key issues in the purchase order system, reducing error reports by 23% and enhancing overall system stability.

Software Engineer (HCL Tech)

SEPT 2022 – MAY 2024

- Implemented new features and resolved defects in Spring Boot for the backend API, leading to a notable 7% improvement in application boot time.
- Orchestrated seamless migration of cloud application from AWS to Linode Akamai Cloud, with database shift from DynamoDB to MongoDB.
- Transitioned serverless functions from AWS Lambda to OpenWhisk and upgraded AWS API Gateway to Kong API Gateway, resulting in 30% cost reduction while maintaining optimal performance, scalability, and data integrity.

EDUCATION

Bachelor of Technology (B. Tech.) - Computer Science Engineering

2018 – 2022

Guru Govind Singh Indraprastha University (Delhi)

CGPA-8.6

CERTIFICATION

- | | | | |
|-----------------------------------|----------------------|------------|----------|
| Azure Developer Associate, AZ 204 | Link | Microsoft: | FEB 2024 |
| Azure fundamentals, AZ 900 | Link | Microsoft: | JAN 2024 |

SKILLS

- Programming Languages:** Core Java, JavaScript, Python (familiar), C/C++ (familiar).
- Database:** MySQL, MongoDB, PostgreSQL.
- Front end:** HTML, CSS, Bootstrap, React.
- Back end:** Spring, Spring Boot, Rest API, Hibernate, NodeJS(familiar).
- Tools:** Git/GitHub, Docker, Kubernetes, Kafka, Maven, Gradle, and Elastic search.
 - > **Data Structures and Algorithms** | Object-Oriented Programming | Operating System | Linux | Database Management System | Computer Networks | **Linode** | **Azure** | **AWS**.
 - > **Communication** | **Leadership** | **Teamwork**.
